## Module 3 Mathematical Reasoning

Sometimes, Always, or Never True

Decide whether each of the following statements is always, sometimes, or never true. Justify your choice.

1. Diagonals of a parallelogram are $\qquad$ perpendicular to one another.
2. Diagonals of a trapezoid $\qquad$ bisect each other.
3. Diagonals of a pentagon $\qquad$ have the same length.
4. A figure with a larger perimeter $\qquad$ has a larger area.
5. The medians of a triangle $\qquad$ divide its interior into 6 regions of equal area.
6. Rectangles are $\qquad$ similar.
7. A rotation followed by a rotation $\qquad$ results in a reflection.

## Student Work Samples

Data collected from the Year 2 Mathematics Coaching Program January virtual session demonstrates $5^{\text {th }}$ and $6^{\text {th }}$ grade students' reasoning to the following statement: Since 5 is less than 6 , then one-fifth is less than one-sixth. (See below)

## Guiding discussion questions:

- What can be learned from the students' responses?
- How are the ways these children reason different from the ways your students reason?
- How might the responses be different if the task was given to students in grades $7^{\text {th }}$ and $8^{\text {th }}$ grade students?

## Student \#1

1. Five is less than six, so one-fifth is less than one-sixth.

Nevertruebecause the larger the denominator the smaller it gets like, $\frac{1}{10}$ and $\frac{1}{717}$ is greater than $\frac{1}{10}$.

## Student \#2

(1.) Five is less than six, so one-fifth is less than one-sixth.

Sometimes true because it depends on the size of the parts. If there the same then one-fisth is bigger as the pritures shows below a $\frac{1}{5}$

1. Five is less than six, so one-fifth is less than one-sixth. Never tree, because it takes less time to get to $\frac{1}{5}$ and it takes more to get to $\frac{1}{6}$.

Student \#4
Never true beceuse, I have a picture and is smaller than $\frac{1}{5}$.

Student \#5

1. Five is less than six, so one-fifth is less than one-sixth.
sometimestrue, because one-fitth
might have a whole and oneSixth might not have a
whole,

Student \#6
always true: because one of them one. six is Just six and Six is bigger then one. Pith because it is Just fir o and six is bigger than five.

Student \#7

2015 Mathematics Teaching Institute

Student \#8

## Student \#9

## Always, Sometimes, or Never True

## Building Mathematical Reasoning

Select a few of the following statements for a topic you usually teach. Determine if each statement is always true, sometimes true, and never true. Provide a convincing justification for how and why you arrived at your conclusion.

- Number Theory

1. All operations are commutative.
2. The product of two nonprime numbers is a prime number.
3. A number can be both irrational and rational.
4. Dividing a whole number by a fraction yields a quotient that is greater than the whole number.
5. A matrix always has an inverse.
6. The identity matrix is commutative with all other matrices of the same square size.
7. If $A, B$, and $c$ are matrices, then $A(B+C)=A B+C A$.
8. A geometric sequence grows faster than an arithmetic sequence.
9. If you add n consecutive numbers together, the result is divisible by n .
10. The sum of a rational number and an irrational number is irrational.
11. The product of a rational number and an irrational number is irrational.
12. If a whole number has an odd number of factors, then it is a perfect square.
13. If you add the same number to the top and bottom of a fraction, the fraction gets bigger in value.
14. A real number is also a complex number.
15. Infinity is a complex number.

- Algebra

1. $x^{2}=2 x$
2. $(x+y)^{2}=x^{2}+y^{2}$
3. $\sqrt{x^{2}}=x$
4. $x^{2}<x^{3}$
5. If $x$ is greater than $y$, and both are nonzero, then $\frac{1}{y}>\frac{1}{x}$.
6. If $x$ is any even number, then $x^{2}$ is divisible by four.
7. $\sqrt{49}-\sqrt{49}=0$
8. A system of two linear inequalities has a solution.
9. There are infinitely many polynomials with zeros $\mathrm{a}, \mathrm{b}$, and c .
10. The least common denominator of two rational expressions is the product of the denominators.

## - Functions

1. The domain of a square root function is the set of all non-negative real numbers.
2. The graph of $f(x)=2^{x}$ lies in Quadrant I.
3. The functions $f(x)$ and $f(|x|)$ have the same domain.
4. The functions $f(x)$ and $f(2 x)$ have the same range.
5. The inverse of a function is also a function.
6. The vertex of a parabola occurs at the minimum value of the function.
7. The graphs $f(x)=a x^{2}$ and $f(x)=-a x^{2}$ have the same width.
8. A quadratic function has two real solutions.
9. Composition of functions is commutative.
10. $f(x+y)=f(x)+f(y)$

## - Geometry

1. Right triangles can be equilateral.
2. Two triangles with the same perimeter also have the same area.
3. Two triangles with the same area also have the same perimeter.
4. If the side of a right triangle is 5 cm and another is 12 cm , then the third side must be 13 cm .
5. If a circle with diameter of length $x$ and a square has side length $x$, then the area of the circle will be greater than the area of the square.
6. If a shape has an area of $9 \pi$, then the shape is a circle.
7. If the length of a right rectangular prism is doubled, then the surface area is also doubled.
8. If the volume of a right rectangular prims is doubled, then the surface area is also doubled.
9. When you cut a shape and rearrange the pieces, the area and perimeter stay the same.

10. When you cut a piece off a shape, you reduce its area and perimeter.
11. If the sides of a triangle are $a, b$, and $c$, then $a^{2}+b^{2}=c^{2}$.
12. If the midpoints of all the sides of an equilateral triangle are connected, and this process is repeated 3 more times with the resulting triangle from the previous step, then the area of the final triangle is $\frac{1}{256}$ the original area.
13. A line segment that is tangent to a circle $O$ at its midpoint has its endpoints at $A$ and $B$. If $A B$ is the diameter of circle 0 , then triangle $O A B$ is a right triangle.
14. If an angle inscribed in a circle is bisected, the bisection ray passes through the center.
15. In a triangle, the centroid and incenter are the same point.

## - Trigonometry

1. $\cos \theta=\cos (-\theta)$
2. $\sin \theta+\cos \theta=1$
3. $\sin \theta=\cos \theta$
4. $4 \sin ^{2} \theta-1=0$
5. $\sin \theta=-\sin (-\theta)$
6. $\sin \theta=\tan \theta$
7. $\sin (2 x)=2 \sin (x)$
8. Doubling the amplitude of a trigonometric function doubles the period of the function.
9. Stretching the graph of a trigonometric function changes the period of the function.
10. Applying a phase shift of a secant graph changes the location of vertical asymptotes.

## - Statistics and Probability

1. The mean of a set of numbers is one of the numbers of that set.
2. The median of ten consecutive integers is one of those integers.
3. If the mode of a set of numbers is 14 , then 14 is one of the numbers of that set.
4. The mean of a set of numbers is greater than the median of that set of numbers.
5. If you add a number to a set of numbers, the mean changes.
6. The probability of an event occurring is greater than 1.
7. The probability of an even occurring can be negative.
8. If two sets of numbers are combined, then the mean of the new set is the same as the mean of the 2 means.
9. If the size of a sample increases, then the standard deviation increases.
10. If the same value is added to each member of the set, then the mean doesn't change.
11. If the same value is added to each member of the set, then the median doesn't change.
12. If the same value is added to each member of the set, then the mode doesn't change.
13. If you get $85 \%$ on a test where the mean is $80 \%$, and $65 \%$ of a different test where the mean is $60 \%$; then the score of $65 \%$ is better than $85 \%$.
14. Half of the students taking a test score less than the mean score.
15. $P(A$ or $B)=P(A$ and $B)$
